

MEASURED BUILDING SURVEY

If you require facade elevations, floor plans or building cross sections, our measured building surveys can be specified at a scale and level of detail to suit your project.

Our adaptable approach means that clients can specify exactly what they require, this ensures that the process is as efficient and cost effective as possible.

In addition to our standard outputs we are also able to create full 3D building models that can be loaded straight into your BIM software. We can also provide reflected ceilings plans, roof plans and high resolution virtual tours of the subject building.

In addition, we are able to merge a measured building survey with a topographic survey of the surrounding area.

A MEASURED BUILDING SURVEY CAN HELP IDENTIFY ANY GAPS BETWEEN THE ORIGINAL PLAN AND ACTUAL CONSTRUCTION.

IDEAL FOR

Planners & Developers

-

Architects

-

Construction

-

Homeowners

-

Estate Managers

-

Engineers
