

TOPOGRAPHIC SURVEY

Our topographic surveys will help you to decide if a project has real investment potential. We offer a thorough and tailored service that begins with a discussion to finalise a specification. We can provide this or work to yours.

During this process we can discuss the information you require, such as site grid, level of detail, the extent of the project and outputs (or others, should you need them). We can also meet you on site to view potential issues first hand.

By working closely with you we'll provide the best solution for the most cost effective results. We can undertake surveys of all sizes from large scale infrastructure projects for a consulting engineer to a plot of land for a single home and everything in between.

For most topographic projects we utilise standard survey instrumentation such as total stations and GNSS receivers. We can also deploy laser scanners or drones where we know they will provide an increase in reliability and efficiency.

The final output will be a detailed plan in digital format, these can include ground levels, contours, pertinent features on the site, drainage information and more.

A TOPOGRAPHIC SURVEY ENABLES YOU TO SEE THE TRUE INVESTMENT POTENTIAL OF YOUR PROJECT.

IDEAL FOR

Planners & Developers

-

Architects

-

Retailers

-

Homeowners

-

Estate Managers

-

Engineers
